Key Benefit

Stability and Reliability

NVRmini is a linux-embedded system that is free from virus attack. With its server-client architecture, NVRmini provides a most stable and high quality monitoring and recording performance. Not only does its software offer a top quality performance, but the hardware enhances stability as well by supporting 4 RAID levels, smart fan, HDD SMART, auto power on, UPS and much more.

Easy to Use

A top user-friendly system should combine fast and flexible configuration with easy operation. With a few simple steps for installation, the web-based management leads users to configure, monitor and playback video everywhere. UPnP search, auto camera detection and GUI schedule save setting-up time, while the easy drag and drop camera, auto scan, preset point patrolling, and multiple views offer users a prime monitoring experience.

Value-added Surveillance Features

There are some outstanding features included in the NVRmini, one of which is mobile phone client. Users can check their live video wherever they want through iPhone, iPad, Android, Windows Phone 7, or BlackBerry. Another feature is Point of Sale (POS). POS data is displayed on live screen of designated channels, and users can fast search POS transaction and related video records. Still another NVRmini feature is the digital watermark on exported video and snapshots, which prevents data from tampered without awareness.
