

## Internet Service Provider Uses NUUO IP Surveillance System to Keep the Telecom Generator Safe

Organization:  
Seednet

Location:  
Taiwan

Industry segment:  
Telcom

Solution:  
NUUO IP+ series

### NUUO solution enables Seednet to maintain a high quality and stable telecommunication service in Taiwan

As one of the leading Internet Service Provider in Taiwan, Seednet's main core service is to provide the top quality data service and Internet connection service to Taiwan cooperate users and massive end users. Seednet greatly contributed to the establishment of the national Highspeed communication network using an optical cable of the highest quality in the country, including more than 10 GigabitEthernet backbone network. In order to provide a stable and quality data service, the first priority is to secure the data servers and telecom generators in the server room.

### NUUO 64 channels IP+ solution fulfills all of Seednet' surveillance requirements

NUUO Partner Clean-Po International CO., LTD, a professional security system integrator, planned for Seednet to establish a security system by using NUUO IP surveillance system with video server together with 120 analog cameras. The whole implementation takes place with 2 set of NUUO IP-64 surveillance system. Every corridors, corners, and even ceiling areas of the multi-floored server rooms, are the major targeted secure area.

The system fulfills the requirement for central monitoring from the Central Control room at Seednet 4th Floor. With NUUO's 64 channel management capacity, every corners, entrance, and roof ceiling of the telecom generator are perfectly secured and monitored as the customer's requirement.

### Seednet now runs a state-of-the-art surveillance system powered by NUUO with a reasonable budget

With the sophisticate planning on NUUO IP surveillance system by Clean-Po International, Seednet security system has become much more effective. The ability to combine more than 32 channel into a single system, including a real-time live image monitoring, has help to save a lot of cost from the human resources from the security department.

The advanced "record on motion" feature in NUUO's recording schedule has improved and save Seednet with a huge expense of the physical equipment such as hard drive disks. Furthermore, the security department of Seednet also can be aware of any irregular activities near the server room with the help
